

ACADEMICS

University of California, San Diego

Computer Science, Bachelors of Science | Minors in Mathematics & Philosophy of Cognitive Science

La Jolla, CA
Expected, June 2028

GPA: 3.9/4.0, Provost Honors, Thurgood Marshall College Honors

Relevant Courses: Software Engineering, Machine Learning Algorithms, NLP (Deep Learning), Adv. Data Structures, Adv. Algorithm Design, Computer Organization, Discrete Math/Graph Theory, Systems Programming, Honors Linear Algebra, Statistical Methods

Milken Community School

Diploma

Los Angeles, CA
June 2024

GPA: 4.5/5.0 Weighted, SAT Score: 1590/1600

Accolades

- *Valedictorian* – Single high school valedictory speaker chosen from graduating class of 130
- *UCSD DOC Excellence in Undergraduate Research Award* – Recognized for research paper on Engineering Ethics Education
- *AP Scholar With Distinction* – Received 5/5 on nine AP tests, including Computer Science A, Calculus BC, and Physics
- *NACLO Finalist* – Scored in the top 10% of the North American Computational Linguistics Open, qualifying for the final round

EXPERIENCE

Genentech

Software Engineering Intern

South San Francisco, CA
(June – September 2026)

- Developed and maintained internal Lab Information Management System (LIMS) software for in-vitro drug discovery
- Built an AI agent for lab automation that lets scientists generate picklists for a liquid handler from natural-language requests
- Built on AWS Bedrock, Python, and TypeScript; used LangSmith for LLM tracing/evaluation
- Developed using agentic workflows with Claude Code in Ona and git worktrees for code organization and parallelization

Anvara

Software Engineering Intern

Remote
(August – September 2024)

- Wrote front-end and back-end code in TypeScript, React, and SQL on a team of ~10 engineers
- Implemented a location selection menu and mapping using the Google Places API for Anvara's digital marketplace
- Worked with commonly-used workplace management software, including GitHub, Slack, and Linear

Math Department, UC San Diego

Instructional Assistant/Grader

La Jolla, CA
(September 2025 – January 2026)

- In charge of evaluating homeworks and quizzes for MATH 3B – Foundations of Precalculus at UC San Diego
- Utilize Gradescope technology to grade work for 265+ undergraduate math students; address grading concerns and requests

PlanetBravo Techno-tainment

Counselor/Tech Instructor

Los Angeles, CA
(June 2024 – August 2025)

- Taught robotics and programming to elementary and middle-school aged children at award-winning STEM summer program
- Taught a variety of tech skills including Arduino, Python development, LEGO Spike Prime, and ClickTeam Fusion
- Supervised, entertained, and cared for ~40 children on a team of 6; oversaw accommodations for children with learning differences

LEADERSHIP

Eta Kappa Nu Engineering Honor Society

Software Engineer & Member, Kappa Psi Chapter

La Jolla, CA
(January 2025 – *present*)

- Developing projects portal website and AI-powered (RAG) chatbot as a full-stack developer on 6-person agile development team
- Help develop outreach curriculum, engineering-focused workshops, and social events for the nation's largest HKN chapter

PROJECTS

Thinking, Fast and Slow – Dual-Model Reasoning Agent

(September 2026)

- Built a multi-agent reasoning system inspired by Kahneman's *Thinking, Fast and Slow*, routing each query between a fast, lightweight "System 1" model and a slower, high-reasoning "System 2" model
- Added a deterministic memory cache and confidence-based escalation, achieving a 6.3x cost reduction while holding 98.5% accuracy
- Implemented in Python over the OpenRouter API (Ministral 3B and DeepSeek R1) with a custom evaluation pipeline

Mahjong Rules Agent

(August 2026)

- Built an AI agent through OpenRouter that answers American Mahjong questions grounded in the official card and rulebook
- Kept answers faithful to the rules through context engineering and custom tool use rather than a retrieval pipeline

Base-3 QR Code

(October 2022 – May 2023)

- Redesigned the QR code from the ground up, using color to store more information in less space
- Utilized Python, OpenCV, and number theory to develop a generation/encryption algorithm, image scanner, and decrypter

CamelTags

(August 2022 – September 2022)

- Developed software to automatically correct hashtags to accessible CamelCase format for visually impaired Internet users
- Worked with Google Search and Twitter APIs in Javascript to access real-time internet usage data and scrape Tweets for testing

SKILLS

Languages: Proficiency in speaking, reading, and writing modern Hebrew

Computer: Experienced in Python, Java, C, Javascript, TypeScript, React, C++ HTML/CSS, Vim, SQL, GitHub, Gitlab

AI/ML: LLM agents & multi-agent systems, context engineering & tool use, RAG, AWS Bedrock, OpenRouter, LangSmith
